

PowerMon S

The PowerMon S analyzer is a compact closed multi-component measuring system. It bases on the spectroscopic measuring principle. The usability could be enhanced perceptible. Compared to the DiaMon the costs for this analyzer has been reduced drastically.

- One PowerMon S replaces several single-parameter analyzers
- Pre-calibrated for quick and easy installation: needs only a simple on-site adjustment to local sample conditions
- Connection of external physical sensors and actuators
- Simple maintenance
- Low reagent consumption
- Long maintenance intervals
- Enhanced remote diagnostics and modem control referring to DiaMon

Applications

- Measuring of Total N and Total P
- Measuring of DOC, CSB
- Measuring of $\text{NH}_4^+ \text{-N}$ / $\text{NO}_3^- \text{-N}$ / $\text{PO}_4^{3-} \text{-P}$
- For waste water treatment plants, rivers, lakes and coastal waters

Advantages

- Simple operation with the well-known PowerMon touch screen
- CAN bus, Profibus DP, Modbus RTU and TCP, LAN and modem
- Better Remote Control facilities in comparison with the previous model
- The connection of more sensors by transmitters

Flow diagram of the PowerMon S

The relationship between the concentration of nitrogen compounds in waste water and their influence on the eco system has been increasingly realised in the last few years.

Phosphorus is present in various forms both in natural water sources and in waste water: it may take the form of ortho-phosphate, inorganic polyphosphates or organic phosphorus compounds.

As a result, waste water treatment plants aim to remove as much of the nitrogen and phosphorus content as possible before the treated water is returned to nature. Monitoring total N and P in the final effluent is an essential part of the control process

The PowerMon S is the ideal instrument for providing a continuous measurement of these important parameters.
