REFEX™ System for Ultra Pure Water pH Measurement

The REFEX Ultra Pure Water pH System is designed to give reliable, continuous real time measurement of water quality in water purification and distribution systems. Designed to be operated as a side stream, the system is supplied complete with a purpose built flowcell assembly that houses the measurement electrodes.

REFEX reference and glass pH electrodes are provided. The robust "jumbo" reference sensor uses a highly stable non-porous polymeric interface instead of a traditional porous liquid junction as used by all conventional reference electrodes. The non-porous nature of the electrode interface prevents the loss of electrolyte into the flow stream, preventing the rapid degradation of the measurement and greatly reducing maintenance overhead and costly frequent replacement of "consumable" probes.

Advantages of Reflex Non Porous Electrodes

- Protected Ag/AgCl reference half cell - REFEX barrier/interface prevents all liquid contact/exchange
- Resistant to fouling and poisoning
- Suitable for temperatures between 0...100°C
- Operates in pressures between full vacuum and 20 bar / 290 psi
- Instantaneous response to pH change
- Constant Eo zero - almost maintenance free
- Long electrode life - many times longer than all others
- Compatible with all modern pH instruments with dual high impedance inputs for pH and reference electrodes.
- No diffusion potential errors in low ionic waters
- No electrolyte refilling - sealed for life
